

Task 2: Create UI Policy Action – Urgency

Activity 1: Configure the Urgency Field

1. Open the UI Policy Actions

Go to the **High Impact Control** UI Policy you created earlier. Scroll down to the **UI Policy Actions** related list. This is where you define the specific behavior of fields when the policy conditions are met.

2. Create a New Action

Click **New** to create a UI Policy Action. This lets you configure how individual fields behave when the UI Policy is triggered.

3. Fill in the Action Details

- **Field name:** Urgency
Select the **Urgency** field on the Incident form. This is the field you want to control.
- **Read-only:** true
Check this option to make the Urgency field read-only whenever the UI Policy condition is met (Impact = High). Users will be able to see the field but cannot change its value.
- **Visible:** Leave this field as is (do not change).
By leaving it unchanged, the field will remain visible on the form, but its behavior will be controlled by the Read-only setting.

4. Submit the Action

Click **Submit** to save the UI Policy Action. The action is now linked to the High Impact Control UI Policy and will automatically apply to the Urgency field when an Incident has High Impact.

5. Optional Verification

To test the action:

- Open an Incident record.
- Set the **Impact** field to **High**.
- Check that the **Urgency** field becomes read-only.

- Change Impact to a different value to confirm that the field reverts back if needed.

The screenshot shows the ServiceNow interface for configuring a UI Policy Action. The left sidebar contains a navigation menu with categories like System Mobile, Service Catalog, System Diagnostics, System UI, and SOAP Security Policies. The main content area is titled 'UI Policy Action - urgency' and includes a search bar and navigation tabs (Favorites, History, Workspaces, Admin). Below the title bar, there is a description: 'UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More Info](#)'. The configuration form includes several fields: 'UI policy' set to 'High Impact Control', 'Table' set to 'Incident [Incident]', and '* Field name' set to 'Urgency' (highlighted with a red box). Other fields include 'Application' set to 'Global', 'Mandatory' set to 'Leave alone', 'Visible' set to 'Leave alone', and 'Read only' set to 'True' (highlighted with a red box). There is also a 'Clear the field value' checkbox. At the bottom of the form, there are 'Update' and 'Delete' buttons.

UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More Info](#)

UI policy: High Impact Control

Table: Incident [Incident]

* Field name: Urgency

Application: Global

Mandatory: Leave alone

Visible: Leave alone

Read only: True

Clear the field value: ☐
