

Task 3: Create onChange Client Script

Activity 1: Create Client Script

1. **Navigate to Client Scripts:**
Go to System UI → Client Scripts.
2. **Click New** to create a new Client Script.
3. **Fill in the details:**
 - **Name:** Auto set urgency for high impact – clearly shows the purpose.
 - **Table:** Incident – the script runs only on Incident records.
 - **Type:** onChange – executes when a field value changes.
 - **Field name:** Impact – triggers the script when Impact is updated.
 - **Active:** true – ensures the script runs immediately.
4. **Paste the script** in the script editor section.
5. **Click Submit** to save the Client Script.
6. **Verify:** Open an Incident record and change the Impact field to **High**. The Urgency field should update automatically

Script:

```
function onChange(control, oldValue, newValue, isLoading) {  
  
    if (isLoading || newValue == "") {  
  
        return;  
  
    }  
  
  
  
    if (newValue == '1') {  
  
        g_form.setValue('urgency', '1');  
  
        g_form.addInfoMessage('Urgency set to High for High impact incident.');
```

}

}

5. Click Submit.

New client-scripts are run in strict mode, with direct DOM access disabled. Access to jQuery, prototype and the window object are likewise disabled. To disable this on a per-script basis, configure this form and add the "Isolate script" field. To disable this feature for all new globally-scoped client-side scripts set the system property "glide.script.block.client.globals" to false.
